PROFESSIONAL SUMMARY

Backend-focused Software Engineer with hands-on experience architecting multi-tenant SaaS platforms, asynchronous processing pipelines, and LLM-grounded features using Laravel, PHP, and React. Skilled in translating complex business requirements into secure, scalable systems through Design Patterns, Event-Driven Architecture, and RESTful APIs. Currently completing a B.S. in Informatics at the International University for Science and Technology, with a 95/100 capstone score from an intensive Laravel backend development program.

TECHNICAL SKILLS

Backend & Frameworks: Laravel, PHP, RESTful APIs, Python, FastAPI

Architecture & Patterns: Microservices, Event-Driven Architecture, Strategy Pattern, Service-Repository Pattern

Databases & Ops: MySQL, MongoDB (Basic), Dynamic JSON-Based Querying, System Deployment (Basic)

Frontend & Tools: React.js (Basic), HTML5, CSS, Bootstrap, Git, GitHub, Firebase (Basic)

ENGINEERING PROJECTS & EXPERIENCE

Full-Stack Developer — DataEngine
Jun 2026 – Present

B2B SaaS Data Analytics Platform · Laravel, React, MySQL, Gemini API

- Architected a multi-tenant SaaS platform enabling automated Excel/CSV analytics with strict per-user data isolation, backed by an asynchronous Laravel Queues pipeline for file ingestion and exports.
- Built a schema-less, dynamic query engine on MySQL JSON columns supporting configurable filtering, search, and sorting across arbitrary spreadsheet structures.
- Integrated an LLM-grounded chat advisor (Google Gemini API) constrained to precomputed report data to prevent hallucinated results, with real-time WebSocket notifications via Laravel Echo.

Backend Developer — Styloraify
Apr – May 2026

AI-Powered E-Commerce Platform · Laravel, MongoDB, Python/FastAPI

- Resolved Laravel–MongoDB integration failures on shared hosting by engineering a custom cache-clearing route and refactoring the User model for MongoDB's string-based _id, preventing JWT crashes.
- Achieved 100% deployment stability for the AI generation engine by embedding custom Python/FastAPI source directly into the infrastructure, using the Service-Repository pattern to secure API keys.

Backend Engineer — Advanced E-Commerce System
Feb – Mar 2026

- Replaced nested conditional logic with the Strategy Pattern to manage multiple payment gateways, enabling scalable future integrations without touching core code.
- Architected a granular RBAC permissions system isolating Finance, Orders, and Support roles, and used Event-Driven Architecture to dispatch asynchronous Firebase/WhatsApp order notifications.

Additional Projects
Sep – Dec 2025

- **Bus Travel Booking Platform:** multi-role transportation SaaS (passenger/company/admin) with transaction-safe seat reservations via pessimistic row locking, polymorphic KYC document uploads, and payment gateway integration.
- **Laravel-RealTime:** broadcasting-based backend for low-latency data sync, plus CORS-optimized REST APIs for React SPA consumption.

EDUCATION & CERTIFICATIONS

B.S. in Informatics (Third-Year Student)
Jun 2023 – Present

International University for Science and Technology

- Relevant coursework: Web Development, Microprocessor Architecture (Intel 8085/8086), Assembly Language, Memory Paging, Data Structures & Graph Theory.

Intensive Backend Development with Laravel (110 Hours)
March 2026

Tamkeen — Empowering the Syrian Programmer

- Final Project Score: 95/100. Received a formal Letter of Recommendation for technical execution, architecture, and secure coding practices.
