PROFESSIONAL SUMMARY

Detail-oriented Backend Developer and third-year Informatics student at the International University for Science and Technology. Passionate about web development and building scalable, secure, and robust architectures using Laravel and PHP. Proficient in Event-Driven Architecture and advanced Design Patterns. Experienced in integrating relational databases with MongoDB and deploying Python/FastAPI AI services. Eager to continuously learn, collaborate on real-world projects, and engineer long-term solutions while consistently writing high-performance, clean code.

TECHNICAL SKILLS

Backend & Frameworks:	Laravel, PHP, RESTful APIs, Python, FastAPI
Frontend & Core Tools:	React.js (Basic Knowledge), HTML5, CSS, Bootstrap, Git, GitHub, Debugging, Firebase (Basic Knowledge)
Architecture & Patterns:	Microservices, Event-Driven Architecture, Strategy Pattern, Service-Repository Pattern
Databases & Ops:	MySQL, MongoDB (Basic Knowledge), System Deployment (Basic Knowledge)

ENGINEERING PROJECTS & EXPERIENCE

Backend Developer2026

Styloraify (AI-Powered E-Commerce Platform)

- Engineered a custom route to programmatically clear cache, successfully resolving Laravel and MongoDB integration and authentication failures on a shared hosting environment.
- Refactored the authentication system and User Data Model to natively support MongoDB's string-based '_id' structure, preventing server crashes during JWT token generation.
- Achieved **100% deployment stability** for the AI generation engine by directly embedding custom Python/FastAPI source code into the infrastructure.
- Implemented the Service-Repository pattern to maintain clean code separation and secure sensitive API keys.

Backend Engineer2026

Advanced E-Commerce System

- Implemented the Strategy Design Pattern to manage multiple payment gateways, eliminating complex nested conditional statements and ensuring high scalability for future integrations.
- Architected a granular Role-Based Access Control (RBAC) permissions system, strictly isolating data access between distinct administrative roles (Finance, Orders, Support).
- Optimized system performance using Event-Driven Architecture; configured Events and Listeners to asynchronously dispatch Firebase and WhatsApp notifications upon order updates.

Backend Developer2025 – 2026

Additional Projects (Real-Time & Integration)

- Developed "Laravel-RealTime", a broadcasting-based backend environment ensuring low-latency, real-time data streaming and synchronization.
- Engineered secure backend APIs specifically optimized for React Single Page Applications (SPA), effectively resolving Cross-Origin Resource Sharing (CORS) limitations.

EDUCATION & CERTIFICATIONS

Bachelor in Informatics (Third-Year Student)Jun 2023 – Present

International University for Science and Technology

- Relevant Coursework: Web Development fundamentals, Microprocessor Architecture (Intel 8085/8086), Low-level Assembly Language programming, Memory Paging, and advanced Data Structures (Graph Theory).

Intensive Backend Development with Laravel Program (110 Hours)March 2026

Tamkeen (Empowering the Syrian Programmer)

- Final Project Score: 95/100.**
- Received a formal Letter of Recommendation commending strong technical execution, structured architecture, problem-solving mindset, and the ability to write secure, high-performance code.
