SUMMARY

Backend developer who builds complete web products with Laravel and React, from the database to deployment. Shipped five projects in the last year, including a multi-user analytics platform with an AI assistant and an e-commerce platform with payments, roles, and WhatsApp notifications. Delivers working features quickly, writes clean and maintainable code, can own a feature end to end, and has collaborated with other developers on shared projects. Completing a B.S. in Informatics; scored 95/100 on the final project of an intensive 110-hour Laravel program and received a letter of recommendation.

SKILLS

Backend: Laravel, PHP, REST APIs, Python (FastAPI)
Frontend: React.js, HTML5, CSS, Bootstrap
Databases: MySQL, MongoDB
Tools & Deployment: Git, GitHub, Docker, Firebase, Postman (API documentation collections), shared-hosting deployment
Languages: Arabic (native); English (excellent reading and writing, conversational developing)
Practices: Design patterns (Strategy, Service-Repository), event-driven notifications, role-based access control

PROJECTS

DataEngine — B2B Data Analytics Platform

Jun 2026 – Present

Laravel, React, MySQL, Gemini API · GitHub

Users upload Excel/CSV files and get searchable reports and an AI assistant, with each user's data fully private.

- Built a multi-user platform where every customer's data is kept completely separate from others.
- Moved heavy file uploads and exports to background jobs (Laravel Queues) so the app stays fast.
- Built filtering, search, and sorting that works on any spreadsheet layout without database changes per file.
- Added an AI chat assistant (Google Gemini) that answers only from the user's own report data, preventing made-up answers. Live notifications via WebSockets.

Styloraify — AI-Powered E-Commerce Platform

Apr 2026 – May 2026

Laravel, MongoDB, Python/FastAPI · Live Demo · GitHub

- Fixed recurring Laravel–MongoDB crashes on shared hosting (login token errors, caching issues), bringing the app to stable production.
- Connected a Python/FastAPI AI generation service to the platform and kept API keys secure on the server using the Service-Repository pattern.
- Worked with a frontend developer using an agreed API contract and clear documentation.

Kandura — Custom Tailoring Management System

Feb 2026 – Mar 2026

Laravel, React, MySQL · GitHub

- Rewrote tangled payment code using the Strategy Pattern, so adding a new payment gateway means adding one class instead of editing existing code. Currently supports cash payment and Stripe.
- Built role-based access for Finance, Orders, and Support teams, so each team sees only what it needs.
- Sent order notifications through Firebase and WhatsApp in the background, so customers get updates without slowing down checkout.

Additional Projects

Sep 2025 – Dec 2025

- **Bus Travel Booking Platform** (Laravel, co-developed with a graduate developer): passenger, company, and admin roles; seat reservations that prevent double booking using database row locking; ID document uploads; payment integration. GitHub
- **Al-Ashab Commerce Platform** (Laravel, React): multi-store e-commerce with WhatsApp messaging, order and customer management. GitHub

EDUCATION & CERTIFICATIONS

B.S. in Informatics

Jun 2023 – Expected 2028

International University for Science and Technology

Coursework: Web Development, Data Structures & Graph Theory, Assembly Language, Microprocessor Architecture.

Intensive Backend Development with Laravel (110 hours)

March 2026

Tamkeen — Empowering the Syrian Programmer

Final project score 95/100. Received a formal letter of recommendation for technical quality, architecture, and secure coding.
